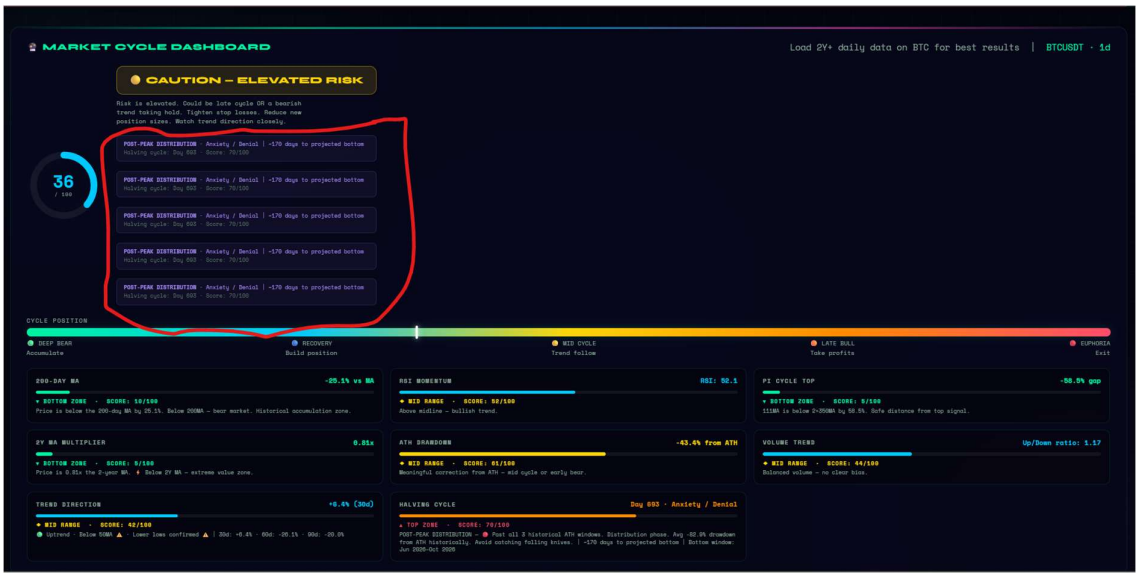
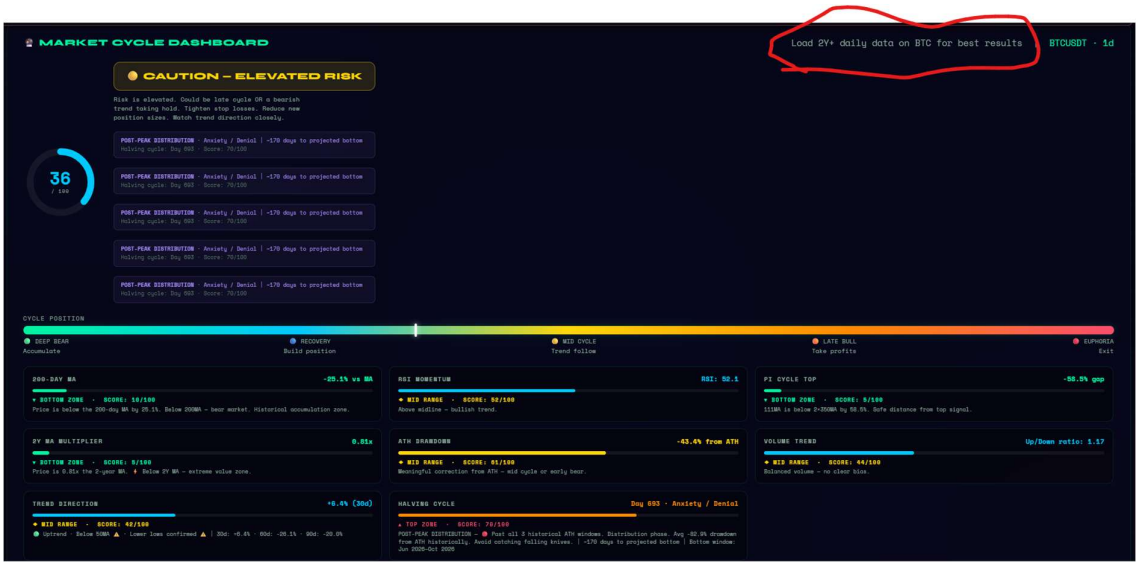
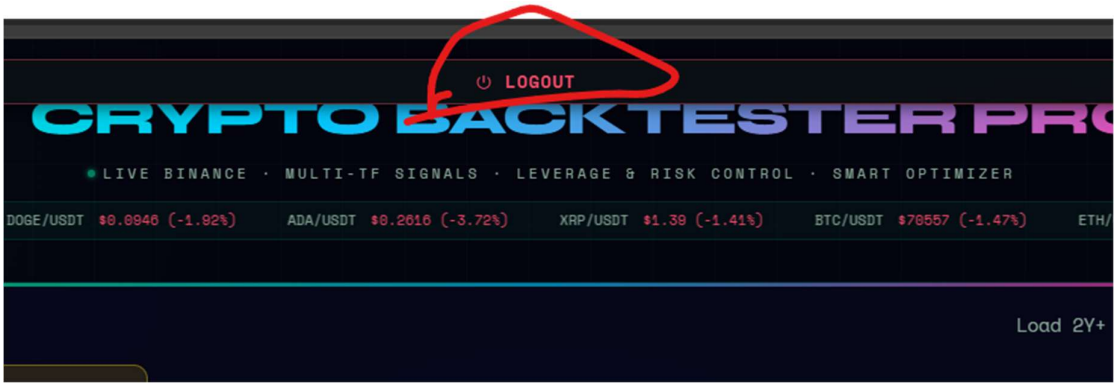
Feedback on the Market Cycle Dashboard

1. Why are these repeating?



2. Shouldn't the just default and load the full BTC history on the daily and calculate automatically? I'm not sure what the benefit is getting the user to do it. What do you think?



3. Have your agents go and research are we capturing everything we need in this to accurately say where we are in the cycle. Please have them also fact check all of the current data that is in there. The text should also be bigger so it is easier to read


4. The logout button doesn't work.
