1. Executive Summary

This document provides a comprehensive UI/UX redesign guide for the Dashboard Ultimate crypto trading platform. The dashboard is a monolithic single-page application (~20,500 lines) with 8 tabs: Backtester, Degen Scanner, Market Intel, Best Trades, Alerts, Paper Trade, Live Trading, and Predictions.

The current UI is functional but has a developer-prototype aesthetic. This guide provides specific, implementable recommendations to transform it into a smooth, modern, premium trading experience.

1.1 Design Philosophy

Bloomberg Terminal depth meets modern fintech clarity. Information-dense but never cluttered, dark but never dull. The goal: smooth, modern, sexy -- but still functional for serious traders.

1.2 Key Themes

- Reduce accent colors from 6+ to a strict 5-color palette
- Replace blocky monospace headers with Inter + JetBrains Mono pairing
- Consistent 8px border-radius on cards (slightly rounded, not bubbly)
- 4-tier background depth system for spatial hierarchy
- Replace all emoji with Lucide SVG icons
- Add micro-interactions: hover lift, value flash, skeleton loaders
- Establish a rigid design system enforced across all 8 tabs

2. Current State Analysis

The dashboard currently uses a dark theme (#0a0e17 background) with neon green (#00f5a0) as the primary accent. Multiple competing accent colors (cyan, pink/magenta, orange) fragment visual attention. Headers use large monospace/block fonts. Cards have thin 1px borders with sharp corners. Each tab uses a different highlight color.

2.1 Tab Descriptions from Screenshots

Tab: Backtester

Left sidebar with config controls (dropdowns, inputs, date pickers), right area with Market Cycle Dashboard gauge (score 31), funding rate colored boxes (BTC -0.0028%, ETH -0.0042%, SOL -0.0088%, XRP -0.0009%), historical bear market comparison cards ($28K pattern, $22K avg, $16K pattern). Dense layout with sharp-cornered boxes.

Tab: Degen Scanner

Sub-tabs row (By Return Tier, Live Feed, DNA Benchmarks, Watchlist, Bought, Perfect 100, 100x Club) as colored pill buttons. Auto-trade settings section with meme coin scanning. Loading spinner for results.

Tab: Market Intel

Sub-tabs (Market Overview, Coin Screener, AI Top Picks, Astro Cycles, CTF Flows, Bees Feed). Stat cards at top (Total BTC Cap $2.5T, BTC Dominance 56.9%, Active Cryptos 18,283, Total Volume $578B, Cycle Day 694, BTC Price $70,950). Halving Cycle Position progress bar. Fear & Greed Index showing 15 (Extreme Fear). News Sentiment -35. Sector Performance Heatmap. Market Structure Signals. Macro Environment.

Tab: Best Trades

Trade cards in horizontal row, each with probability arc gauges (55%-93%), market quality badges (A-Grade green, B-Grade yellow, No Trade red), R:R ratios (1.2:1 to 1.5:1), confidence ratings, SPOT/PERPS toggles. Auto-trade settings panel above with BloFin connection status.

Tab: Alerts

Browser Notifications panel and Discord Webhook panel side by side. Empty state: 'No alerts yet - click New Alert to create your first one.'

Tab: Paper Trade

Left sidebar with strategy config (lookback 30 days, max daily trades 999, stop after 3 losses, Kill Switch DM). Center with empty strategy view. Bottom Trading Wallet section with Generate New Wallet, Import Keypair, Unlock Existing buttons.

Tab: Live Trading

Left panel: Engine Status (Stopped, Credentials Locked), BloFin API Keys form (API Key, Secret Key, Passphrase, encryption password, Demo Mode checkbox, Store API Keys button). Center: Live Strategies, Open Positions, BloFin Futures (530+ pairs), Trade History sections.

Left bottom: Safety Controls (max position $500, max leverage 29, daily loss limit $100, auto-close near liquidation 0%) + red Kill Switch button.

Tab: Predictions

Left: Bot Status (Stopped), Strategy Config (bet size 10 USDC, edge threshold 10), Performance metrics (win rate, trades, total PnL, ROI all showing '--'). Center: Active Polymarket Markets (loading), Live Signals (waiting), Trade Log (no trades yet).

3. Color Palette Refinement

3.1 Primary Green -- Toned Down

Current #00f5a0 is oversaturated and causes eye strain. Shift to a premium emerald that still reads as 'crypto/fintech'.

Current	Recommended	Usage
#00f5a0 (neon)	#00d68f (emerald)	Primary accent, positive values, CTAs, active states
--	#00e8a2 (bright variant)	Hover/highlight states ONLY, never resting state

3.2 Strict 5-Color Palette

Drop cyan and magenta entirely. They fragment visual attention in data-heavy interfaces.

Role	Color	Hex	Usage
Primary Accent	Emerald Green	#00d68f	Positive values, primary CTAs, active states
Loss/Danger	Soft Red	#ff6b6b	Negative values, errors, Kill Switch
Warning/Caution	Amber	#f0b232	Warnings, B-grade badges, locked states
Info/Secondary	Steel Blue	#5b8def	Links, secondary actions, info badges
Neutral Highlight	Cool Gray	#8b95a5	Tertiary info, disabled states, borders

3.3 Background Depth System (4-Tier)

Layer depth using a surface hierarchy, not gradients on the main background:

Variable	Hex	Purpose
--bg-base	#0a0e17	Deepest layer -- page background
--bg-surface	#111827	Cards, panels
--bg-elevated	#1a2235	Modals, dropdowns, hover states
--bg-hover	#222d42	Row hovers, interactive highlights

3.4 Text Hierarchy

Use color intensity as the primary differentiator, not font-size alone:

Variable	Hex/Value	Usage
--text-primary	#e2e8f0	Key values, numbers you act on
--text-secondary	#94a3b8	Labels, descriptions
--text-tertiary	#64748b	Timestamps, metadata, footnotes

--text-disabled	#475569	Disabled controls

3.5 Profit/Loss Colors

Raw #00ff00 and #ff0000 are amateur. Use desaturated, warm-shifted variants:

- Profit: #00d68f with background rgba(0, 214, 143, 0.1)
- Loss: #ff6b6b with background rgba(255, 107, 107, 0.1)
- Use left-border accent (2px solid) on P&L rows for instant visual scanning

3.6 Market Quality Badges

Replace saturated fills with subtle tinted pill badges:

- A-Grade: color #00d68f, background rgba(0, 214, 143, 0.12), border rgba(0, 214, 143, 0.2)
- B-Grade: color #f0b232, background rgba(240, 178, 50, 0.12), border rgba(240, 178, 50, 0.2)
- C-Grade: color #94a3b8, background rgba(148, 163, 184, 0.1) -- use GRAY, not orange
- No-Trade: color #64748b, background rgba(100, 116, 139, 0.08) -- gray and quiet, NOT red

3.7 Border Colors

Variable	Value	Usage
--border-subtle	rgba(255,255,255,0.06)	Card borders
--border-default	rgba(255,255,255,0.10)	Dividers, input borders
--border-strong	rgba(255,255,255,0.16)	Focused inputs, active cards

4. Typography

4.1 Font Pairing

Replace all-monospace with a dual-font system:

- UI/Headers: Inter (or Plus Jakarta Sans) -- clean geometric sans-serif
- Data Values/Numbers: JetBrains Mono (or IBM Plex Mono) -- refined monospace with tabular figures

4.2 Type Scale

Token	Size	Usage
--text-xs	11px	Tiny badges, tooltips, uppercase labels
--text-sm	13px	Body text, labels, descriptions
--text-base	14px	Default body, card content
--text-lg	16px	Section headers
--text-xl	20px	Key metric values
--text-2xl	24px	Featured numbers, gauge values

4.3 Header Treatment

Current large monospace block fonts ('CRYPTO BACKTESTER PRO') are aggressive and amateur. Replace with:

- Page titles: Inter, 18px (not 28-32px), font-weight 600, letter-spacing 0.02em, color #e2e8f0
- Section headers: Inter, 13px, font-weight 600, uppercase, letter-spacing 0.06em, color #8b95a5 (muted)
- Card titles: Inter, 15px, font-weight 500, color #c9d1d9

4.4 Number Formatting

- All numeric values use font-variant-numeric: tabular-nums (columns align vertically)
- Large numbers: letter-spacing -0.02em for tighter, premium feel
- Uppercase labels: letter-spacing 0.06em

5. Border Radius & Card Design

5.1 Border Radius Scale

Sharp corners = legacy terminal. Overly round (20px+) = consumer app. Sweet spot for trading: 8px on cards.

Token	Value	Usage
--radius-xs	4px	Tooltips, tiny badges
--radius-sm	6px	Buttons, inputs, dropdowns
--radius-md	8px	Cards, panels, sections
--radius-lg	12px	Modals, popovers, dialogs
--radius-pill	20px	Status pills, tags, tab indicators
--radius-full	9999px	Avatars, circular icons

5.2 Card Treatment

Replace thin 1px wireframe borders with layered surfaces and subtle elevation:

```
background: var(--bg-surface);  /* #111827 */
border: 1px solid rgba(255, 255, 255, 0.06);
border-radius: 8px;
box-shadow: 0 1px 3px rgba(0,0,0,0.3);
/* Subtle top-border highlight for depth illusion */
/* via ::before pseudo-element with gradient */
```

This single-pixel top highlight is how dYdX and modern DeFi dashboards create depth without blur effects.

5.3 Glass Morphism -- Use Sparingly

Use on no more than 2-3 featured elements per tab (e.g., modal headers, featured stat cards):

```
background: rgba(13, 18, 32, 0.7);
backdrop-filter: blur(12px);
border: 1px solid rgba(255, 255, 255, 0.08);
```

Overuse makes everything feel blurry and unfocused. Most cards should be solid surface-1.

5.4 Gradients -- Strict Rules

Use gradients in exactly 3 places:

- Primary CTA buttons: linear-gradient(135deg, #00d68f, #00b377)
- Chart area fills: rgba(0, 214, 143, 0.15) fading to transparent
- Probability gauge arcs

Everywhere else, use flat colors.

5.5 Glow Effects -- Strict Rules

Glow appropriate in exactly 2 cases:

- Active/connected status dots: box-shadow 0 0 6px rgba(0, 214, 143, 0.4)
- Kill Switch button: box-shadow 0 0 12px rgba(255, 107, 107, 0.3)

Never use glow on: card borders, text, section headers, badges, or inactive elements.

6. Spacing & Grid System

6.1 Spacing Scale

Token	Value	Common Usage
--space-1	4px	Icon gaps, tight internal spacing
--space-2	8px	Badge padding, compact gaps
--space-3	12px	Label margins, field spacing
--space-4	16px	Card gaps, internal section padding
--space-5	20px	Card padding (internal)
--space-6	24px	Section gaps, page margins
--space-7	32px	Major section dividers
--space-8	48px	Page-level spacing
--space-9	64px	Hero/empty state spacing

6.2 Grid Layout

- Card grids: grid-template-columns: repeat(auto-fit, minmax(280px, 1fr)); gap: 16px
- Sidebar + main (Backtester, Paper, Live): grid-template-columns: 300px 1fr; gap: 24px
- Stat rows (Market Intel top cards): repeat(auto-fit, minmax(200px, 1fr)); gap: 16px

6.3 Section Dividers

When sections run together, the eye cannot parse groupings. Use labeled dividers:

```
display: flex; align-items: center; gap: 12px;
font-size: 11px; text-transform: uppercase; letter-spacing: 0.08em;
color: rgba(255,255,255,0.4);
/* with ::after gradient line */
```

7. Component Patterns

7.1 Tab Navigation (Main)

Current: 8 tabs with emoji prefixes and per-tab colored highlights. This creates visual clutter.

Recommended: Contained pill-style navigator (like Linear/Vercel). Drop emoji prefixes. Use one active color.

- Active tab: color var(--accent-primary), background rgba(0,214,143,0.15), with 2px bottom indicator
- Inactive: color rgba(255,255,255,0.45), transparent background
- Hover: color rgba(255,255,255,0.75), background rgba(255,255,255,0.04)
- Consider grouping: 'Analysis' (Backtester, Scanner, Intel, Trades, Predictions) + 'Execution' (Paper, Live, Alerts)

7.2 Sub-tabs

Used in Degen Scanner and Market Intel. Style as monochrome pills inside a tinted container:

- Container: background var(--bg-elevated), border-radius 8px, padding 4px
- Active pill: color white, background var(--accent-primary), border-radius 20px, subtle box-shadow
- Inactive: color rgba(255,255,255,0.5), transparent, border-radius 20px

7.3 Buttons (4-Tier System)

Tier	Style	Usage
Primary	Green gradient, dark text, glow shadow, hover lift	Run Backtest, Start Scan, Execute Trade
Secondary	rgba(255,255,255,0.06) bg, subtle border	Save, Export, Configure
Ghost	Transparent, muted text	Cancel, Reset, View Details
Danger	Red tinted bg, red text, red border	Kill Switch, Stop, Delete

- All buttons: height 36px, border-radius 6px, font-weight 600, transition 0.2s
- :active state: transform scale(0.97) for tactile press feel
- Primary hover: translateY(-1px) + stronger glow shadow

7.4 Form Controls

Every input, select, and dropdown should follow one pattern:

- Height: 36px, padding: 0 12px, border-radius: 8px
- Background: var(--bg-elevated) #1a2235, border: 1px solid rgba(255,255,255,0.08)
- Focus: border-color var(--accent-primary), box-shadow 0 0 0 3px rgba(0,214,143,0.15)
- Replace native <select> with custom dropdowns using consistent styling

- Custom checkboxes: 16x16px, rounded 4px, checked = blue-500 fill with white checkmark

7.5 Data Cards (Best Trades)

The most impactful visual component. Recommendations:

- Card: border-radius 16px, padding 20px, shadow-sm default, shadow-lg on hover
- Hover: translateY(-2px), increased shadow, border-color brightens
- Header: asset name + direction badge, separated by bottom border
- Direction badges: pill-shaped, tinted background (green for long, red for short)
- Market quality badge: 28x28px square, rounded 6px, tinted background
- SPOT/PERPS toggle: pill-shaped segmented control in surface-3 container
- Stat rows: separated by subtle 1px borders, label left (tertiary), value right (primary)

7.6 Probability Arc Gauges

High-impact visual component. Premium treatment:

- Stroke-width: 6px (thicker than current), stroke-linecap: round
- Add filter: drop-shadow(0 0 6px currentColor) on the fill arc
- Track background: rgba(255,255,255,0.05)
- Animate stroke-dashoffset on mount so arc sweeps in
- Center: percentage number (22px, weight 800) + small 'PROB' label underneath
- Three-stop gradient: red #ff6b6b (0-33%) / amber #f0b232 (34-66%) / green #00d68f (67-100%)

7.7 Stat Boxes

For Market Intel top cards, Backtester metrics, etc:

- Card: surface-1, border-radius 12px, padding 16px, min-width 140px
- Label: 11px, uppercase, letter-spacing 0.06em, text-tertiary color
- Value: 20px, weight 700, tabular-nums, text-primary color
- Funding rates: replace full colored backgrounds with left-border accent (3px solid)
- Add tiny trend arrow (up/down chevron) next to value for dynamic metrics

7.8 Tables

- Sticky headers: position sticky, surface-1 background, z-index 1
- Header cells: 11px, uppercase, letter-spacing 0.06em, text-tertiary
- Row hover: background var(--bg-elevated) with fast transition
- All numeric columns: font-variant-numeric tabular-nums
- Replace emoji rank medals with styled number pills (gold/silver/bronze tinted)

7.9 Status Indicators

- Wrap dot + text in a subtle tinted pill badge
- Connected: green dot with pulsing ring animation + 'Connected' text
- Disconnected: static red dot, no pulse + 'Disconnected' text
- Status dot: 8px diameter, border-radius 50%, box-shadow glow

7.10 Empty States

Current 'No alerts yet' is plain text. Standardize:

- Center layout: icon (32px, rgba 0.15 opacity) + title (16px, medium) + description (13px, tertiary)
- Optional CTA button below
- Padding: 48px vertical, 24px horizontal

8. Micro-Interactions & Animations

8.1 Transition Standards

Token	Value	Usage
--ease-out	cubic-bezier(0.16, 1, 0.3, 1)	Most transitions
--ease-spring	cubic-bezier(0.34, 1.56, 0.64, 1)	Card transforms, bouncy feedback
--duration-fast	120ms	Color changes, border transitions
--duration-normal	200ms	Transform, shadow transitions
--duration-slow	350ms	Gauge fills, content reveals

8.2 Card Hover

```
transform: translateY(-2px);  /* max -2px, anything more feels exaggerated */
box-shadow: shadow-lg;
border-color: var(--border-default);
:active { transform: translateY(0) scale(0.99); }  /* press down effect */
```

8.3 Live Data Pulse

When real-time values update, flash the accent color then fade to normal:

```
@keyframes value-update { 0% { color: #00d68f; } 100% { color: #e2e8f0; } }
animation: value-update 1.2s ease;
```

8.4 Status Dot Pulse

```
@keyframes pulse-live { 0%,100% { opacity:1 } 50% { opacity:0.4 } }
animation: pulse-live 2s ease-in-out infinite;
```

8.5 Loading States

Replace spinning loaders with skeleton shimmer cards. Spinners feel slow; skeletons feel fast.

```
background: linear-gradient(90deg, surface-2 25%, surface-3 50%, surface-2 75%);
background-size: 200% 100%;
animation: shimmer 1.5s ease-in-out infinite;
```

8.6 Tab Content Transitions

```
/* Fade + slide in from below */
opacity: 0 -> 1; transform: translateY(4px) -> translateY(0);
transition: 0.2s ease;
```

8.7 Per-Tab Recommendations

- Degen Scanner: Replace loading spinner with skeleton shimmer cards

- Market Intel: Fear & Greed gauge should have smooth needle transition, not jumps
- Best Trades: Cards scale(1.02) on hover to indicate interactivity
- Live Trading: Kill Switch button continuous glow pulse

9. Icons & Emoji Replacement

Current: heavy emoji usage in section headers and tabs. Emoji render differently across OS/browsers, are visually heavy, and look informal in a trading context. No serious platform uses emoji in their UI.

9.1 Recommended: Lucide Icons

24x24 SVG, 1.5px stroke weight, MIT licensed, full fintech coverage.

Current Emoji	Lucide Replacement	Context
Target/crosshair emoji	Target / Crosshair	Trade signals
Chart emoji	BarChart3	Analytics sections
Brain emoji	Brain / Sparkles	AI/prediction sections
Bell emoji	Bell	Alerts
Shield emoji	Shield / ShieldCheck	Risk management
Activity emoji	Activity / Zap	Live data, trading
Trending emoji	TrendingUp / TrendingDown	Directional indicators
Dice emoji	Dices / Percent	Predictions
Paper emoji	FileText	Paper trading
Settings emoji	Settings / Sliders	Configuration

9.2 Icon Styling Rules

- Icons match adjacent label text color (never bright accent)
- Size: 16x16px for inline, 20x20px for section headers
- Stroke: 1.5px, color var(--text-tertiary)
- Only active/selected section icon gets accent color

10. Design System Rules (Non-Negotiable)

Rule 1: Surface Hierarchy

Every element belongs to one of 4 surface levels (0-3). Never skip a level. A card on surface-0 is surface-1. A nested element inside that card is surface-2.

Rule 2: One Primary Action Per View

Each tab should have exactly one primary green button. Everything else is secondary or ghost. If a tab has three green buttons, it has no hierarchy.

Rule 3: Consistent Empty States

Every empty state follows the same pattern: center icon + title + description + optional CTA.

Rule 4: Input Styling

Every input, select, and dropdown follows one pattern. No native browser controls.

Rule 5: Scrollbar Styling

Dark dashboards with default light scrollbars look broken. Custom scrollbars: 6px width, rgba(255,255,255,0.1) thumb, transparent track.

Rule 6: Number Formatting

All numeric values use font-variant-numeric: tabular-nums. Positive = green, negative = red, neutral = white. Always.

Rule 7: Section Anatomy

Every section: section-header (title + optional actions on right) then section-content. No exceptions.

Rule 8: Remove Per-Tab Color Coding

Use one active color (primary green), one inactive color (gray). Tabs should not each have their own accent.

Rule 9: No-Trade = Gray, Not Red

Red means danger/error/loss. 'No Trade' means 'skip this' -- it should be the most visually recessive badge, not alarming.

Rule 10: Gradient Discipline

Gradients on primary CTA buttons and chart fills only. Flat colors everywhere else.

11. Shadow System

Token	Value	Usage
--shadow-xs	0 1px 2px rgba(0,0,0,0.3)	Subtle depth, inactive cards
--shadow-sm	0 2px 4px rgba(0,0,0,0.35), 0 1px 2px rgba(0,0,0,0.2)	Default card depth
--shadow-md	0 4px 12px rgba(0,0,0,0.4), 0 2px 4px rgba(0,0,0,0.25)	Elevated cards, active states
--shadow-lg	0 8px 24px rgba(0,0,0,0.45), 0 4px 8px rgba(0,0,0,0.3)	Hover states, modals
--shadow-xl	0 16px 48px rgba(0,0,0,0.5), 0 8px 16px rgba(0,0,0,0.35)	Popovers, overlays
--shadow-glow-green	0 0 20px rgba(0,255,136,0.15)	Active primary buttons
--shadow-glow-red	0 0 20px rgba(255,68,68,0.15)	Danger buttons, kill switch
--shadow-inset	inset 0 1px 3px rgba(0,0,0,0.3)	Input fields

12. Implementation Priority

If implementing incrementally, this order yields the most visual impact per change:

Priority	Change	Impact
1	CSS custom properties -- define all variables in :root	Foundation for everything
2	Typography -- load Inter + JetBrains Mono, apply font rules	Immediate premium feel
3	Card styling -- new surfaces, border-radius, box-shadow	Kills wireframe look
4	Spacing standardization -- consistent spacing scale	Eliminates cramped feeling
5	Tab bar redesign -- uniform active state	Stops 'each tab is different app' feel
6	Button hierarchy -- 4-tier button system	Creates clear action hierarchy
7	Color consolidation -- remove pink/magenta, enforce 5-color palette	Visual coherence
8	Input styling -- consistent form controls	Professional consistency
9	Replace emoji with Lucide SVG icons	Professional, consistent icons
10	Micro-interactions -- transitions, hover states, skeletons	Premium polish
11	Scrollbar + number formatting polish	Finishing touches

The single highest-impact change is items 1-3 together. Those three alone will transform the dashboard from 'developer prototype' to 'professional trading platform'.

13. Reference Platforms

Modern trading/fintech platforms to reference for each component:

Component	Reference Platform	What They Do Well
Tab navigation	Linear, Vercel	Contained pill nav, subtle active states
Data tables	TradingView, Stripe	Sticky headers, row hover, number alignment
Stat cards	CoinGecko, Dune Analytics	Clean label+value hierarchy, trend indicators
Trade cards	Robinhood, Phantom Wallet	Card hover, clean info hierarchy
Gauges/scores	Gauntlet, Messari	Ring gauges with glow, clean scoring
Input/form styling	Raycast, Arc browser	Consistent dark inputs with focus rings
Status indicators	Vercel, Railway	Pulsing dots in tinted pill badges
Alert config	Grafana, PagerDuty	Channel cards with service branding
Wallet/security	Phantom, MetaMask, Ledger	Lock/shield iconography, deliberate layout
Button system	Linear, Stripe	Tiered hierarchy, hover lift, press feedback
Color palette	dYdX, Bybit	Restricted palette, blue-tinted darks
Overall aesthetic	TradingView dark + dYdX	Data-dense but visually clean

14. Mobile Responsiveness

14.1 Tab Navigation

- Horizontal scroll with hidden scrollbars on mobile
- -webkit-overflow-scrolling: touch for momentum scrolling

14.2 Grid Breakpoints

- Stat boxes: 2-column grid on tablet (768px), 1-column on phone (480px)
- Trade cards: single column stack on mobile (640px)
- Tables: horizontal scroll wrapper with border-radius

14.3 Touch Targets

All interactive elements must be minimum 44px height on mobile (Apple HIG standard):

- Buttons: height 44px, min-width 44px
- Inputs/selects: height 44px
- Tab items: padding increased to 12px 16px

15. CSS Variables Master Reference

Complete :root variable set for implementation:

```
:root {
  /* Colors */
  --accent-primary: #00d68f;
  --accent-primary-dim: rgba(0, 214, 143, 0.15);
  --color-loss: #ff6b6b;
  --color-warning: #f0b232;
  --color-info: #5b8def;
  --color-neutral: #8b95a5;

  /* Surfaces */
  --bg-base: #0a0e17;
  --bg-surface: #111827;
  --bg-elevated: #1a2235;
  --bg-hover: #222d42;

  /* Text */
  --text-primary: #e2e8f0;
  --text-secondary: #94a3b8;
  --text-tertiary: #64748b;
  --text-disabled: #475569;

  /* Borders */
  --border-subtle: rgba(255,255,255,0.06);
  --border-default: rgba(255,255,255,0.10);
  --border-strong: rgba(255,255,255,0.16);

  /* Radius */
  --radius-xs: 4px;  --radius-sm: 6px;  --radius-md: 8px;
  --radius-lg: 12px; --radius-xl: 16px; --radius-pill: 20px;
  --radius-full: 9999px;

  /* Spacing */
  --space-1: 4px;  --space-2: 8px;  --space-3: 12px;
  --space-4: 16px; --space-5: 20px; --space-6: 24px;
  --space-7: 32px; --space-8: 48px; --space-9: 64px;

  /* Typography */
  --font-ui: 'Inter', -apple-system, sans-serif;
  --font-mono: 'JetBrains Mono', 'Fira Code', monospace;
```

```
  --text-xs: 11px; --text-sm: 13px; --text-base: 14px;
  --text-lg: 16px; --text-xl: 20px; --text-2xl: 24px;

  /* Transitions */
  --ease-out: cubic-bezier(0.16, 1, 0.3, 1);
  --ease-spring: cubic-bezier(0.34, 1.56, 0.64, 1);
  --duration-fast: 120ms;
  --duration-normal: 200ms;
  --duration-slow: 350ms;
}
```
