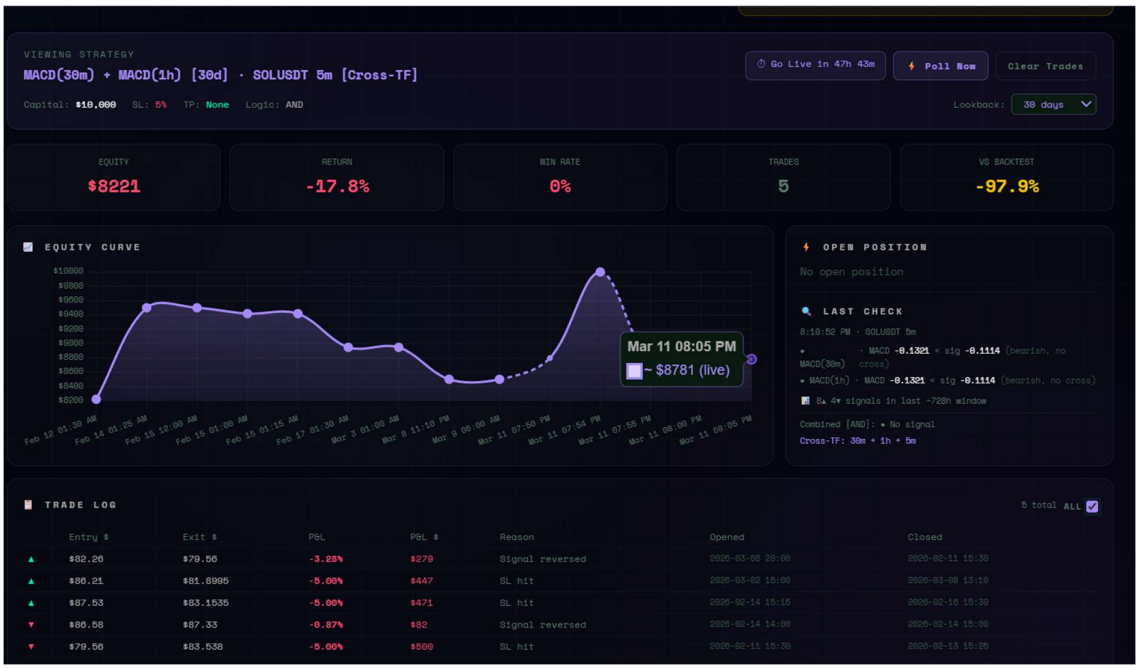
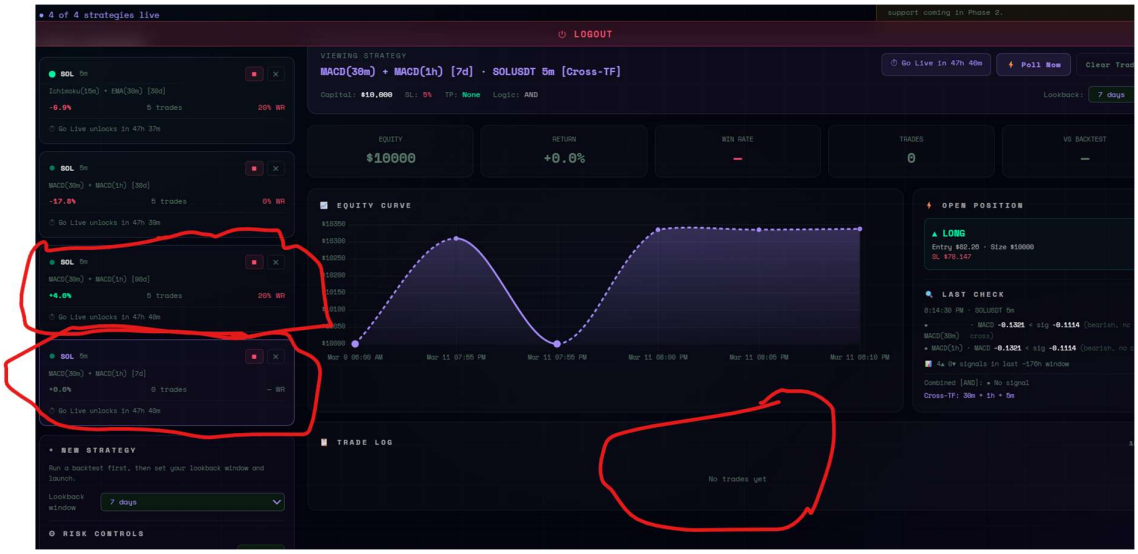
1. How is this showing a live trade is on in the paper trading section but the tradelogs don't reflect it? It show show all trades including live, including live PNL

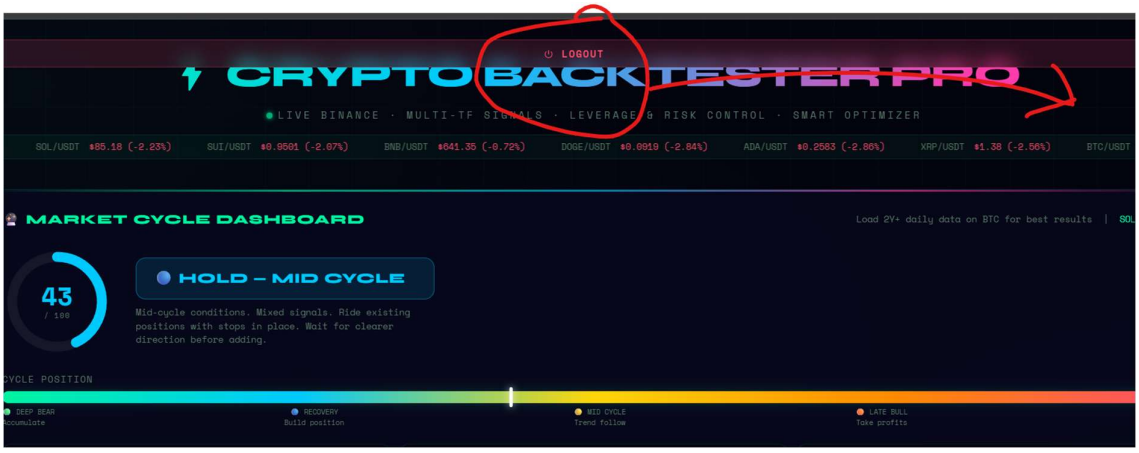


2. Please check best trades as ive had this tab open for ages and nothing is loading.

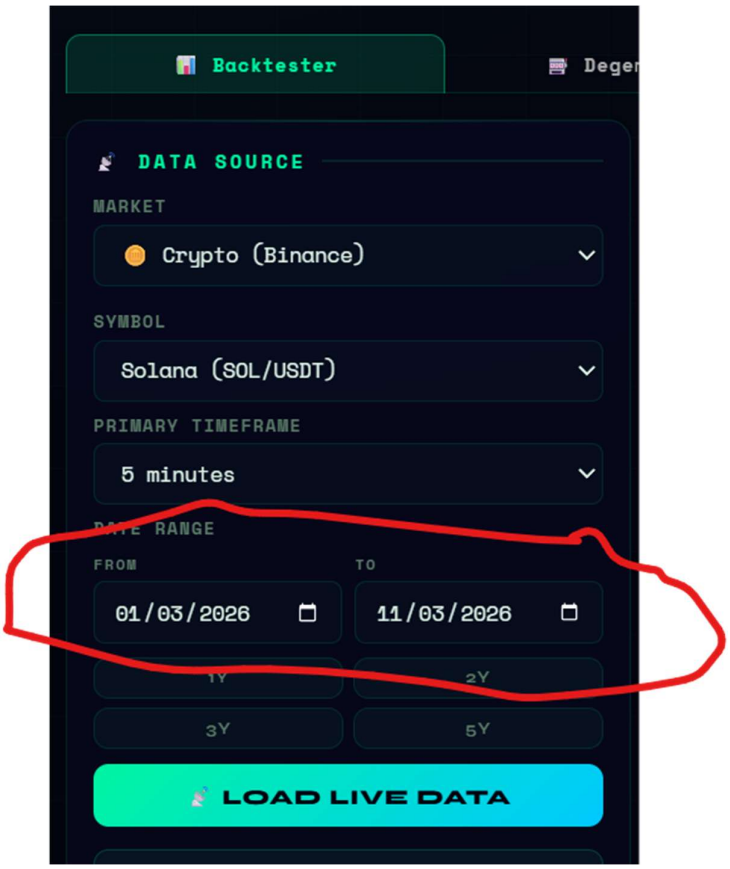
3. How is the same strategy on different look back periods not the same? The strategy should fire on both. Again on one of the strategys there is a live trade(it is not showing in the log) and on the same strategy just a differentlook back period it is not live.



4. The floating logout button should not be floating but fixed to the top right hand corner of the page.



5. I ran this strategy just for the month of March 2026



Here are the tradelogs on the backtester

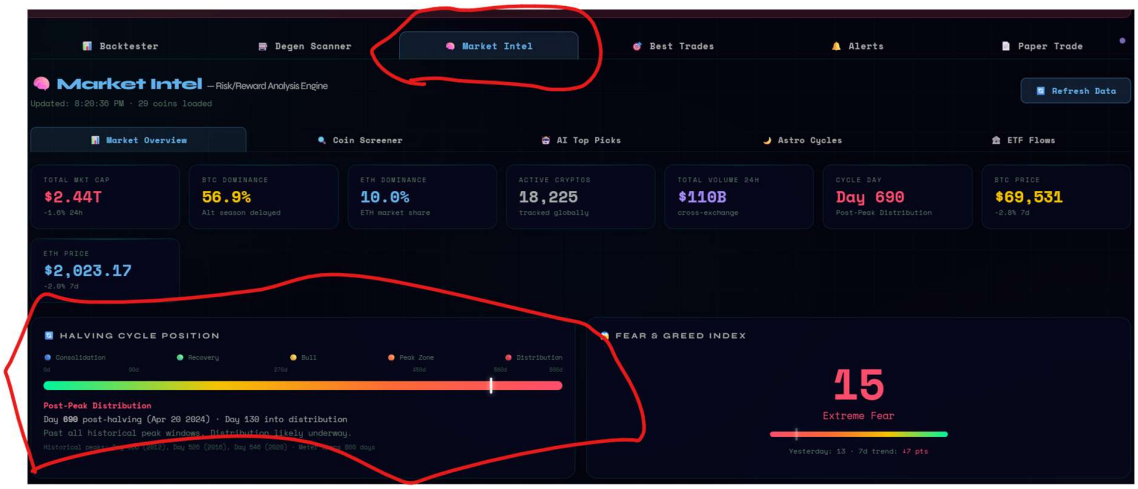
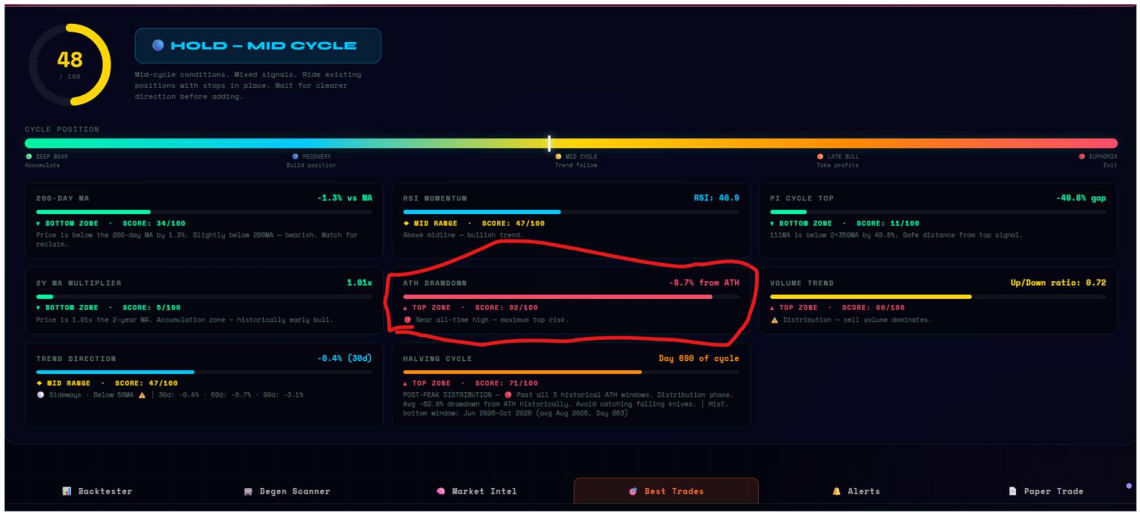
6. I need you to check the logic in this as it doesn't seem right. We may need to add more stages similar to the wall street cheat sheet. Its currently saying 690 days post halving – day 130 into distribution can we add xxx amount of days until ETS bottom? Again I would like to see how what method you are using to calculate that and I would like your thoughts on what we could add to make it as accurate as possible.



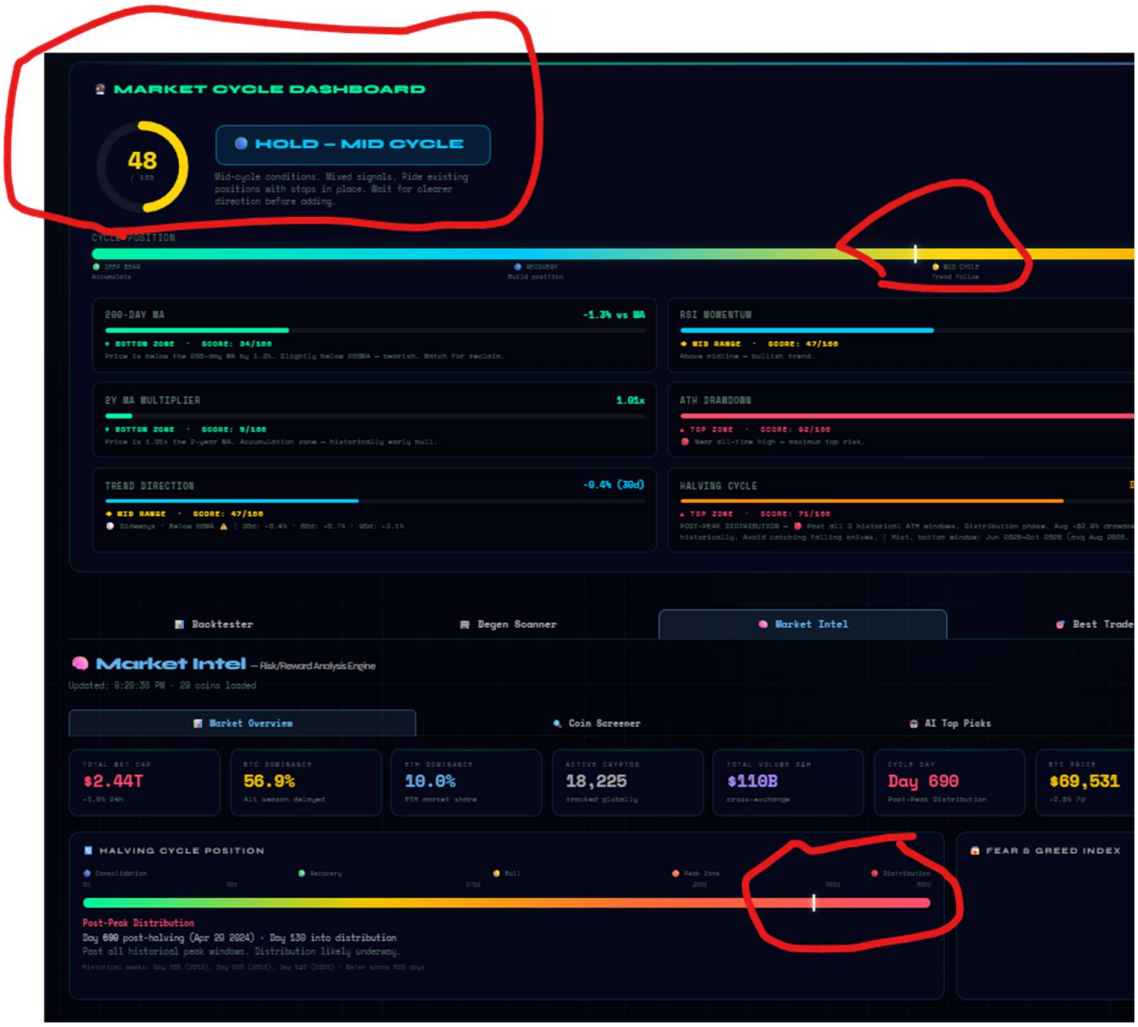
7. We are not near the all time high.



8. We are not Mid cycle. How are you calculating that?

9. We cant say on one that we are mid cycle and on another that we are in distribution phase. Why is the logic you are doing in the background to calculate

that?

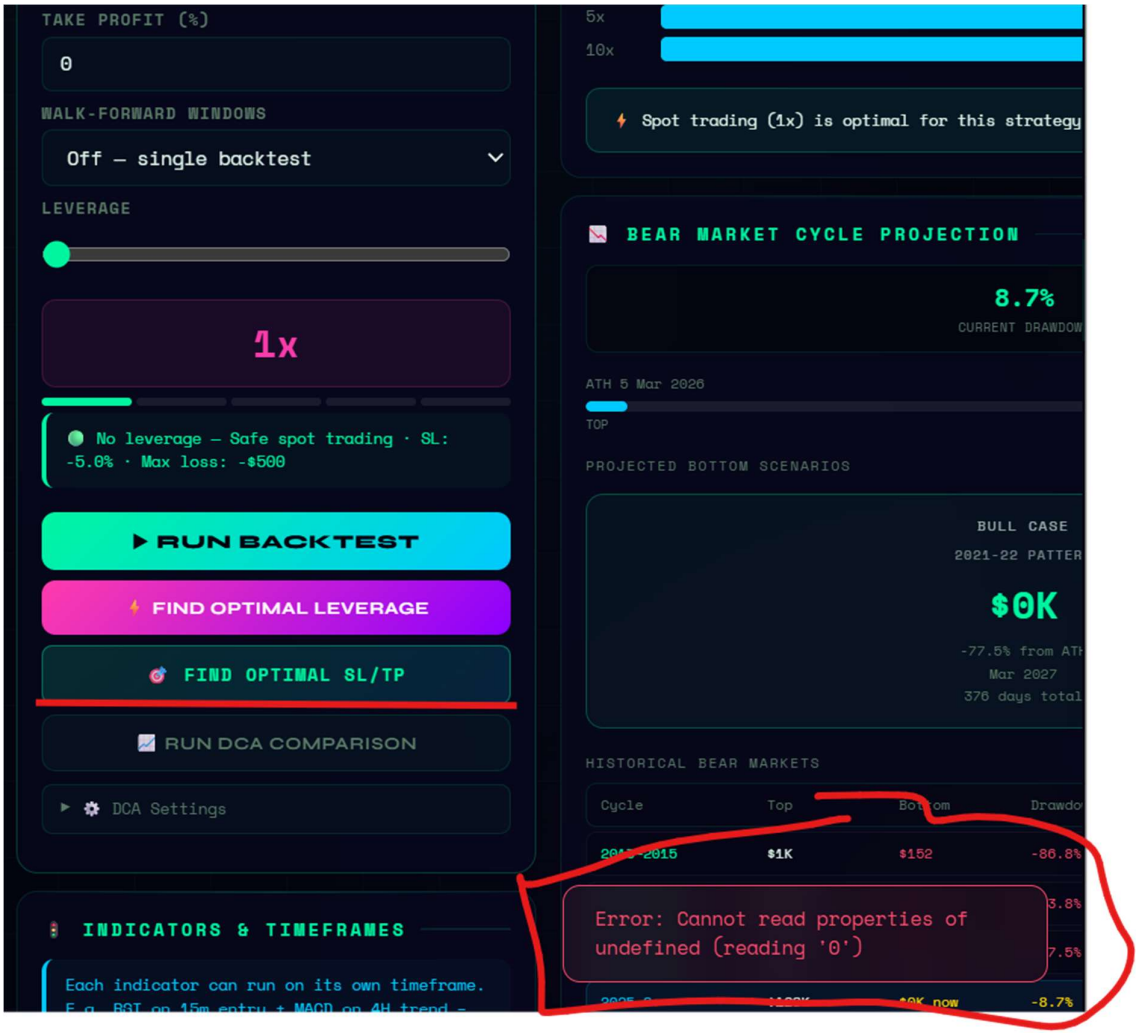


10. We need to be able to see all etf flows for all coins including ETH and SOL

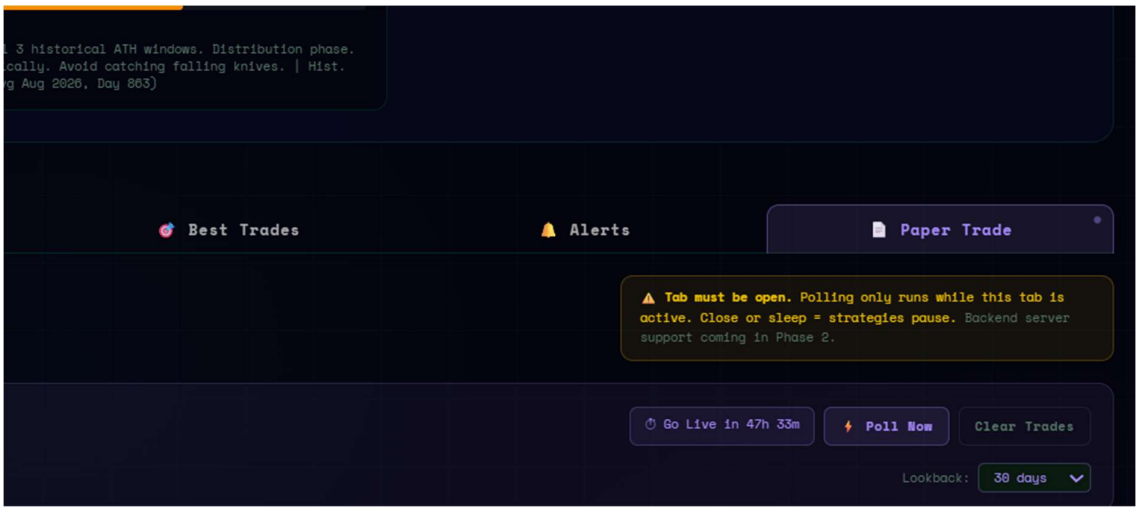
11. We need to make this dashboard more responsive to different screen sizes. I noticed sometime of my laptop not everything is displayed on screen and I have to zoom out to get everything on one screen.

12. What are the steps needed to turn this into a mobile app?

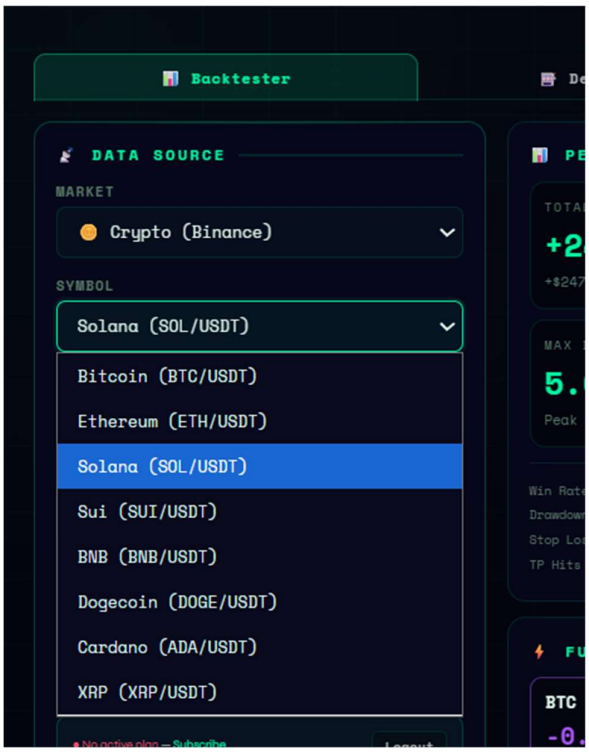
13. When I click 'find optimal SL/TP I get this error msg.



14. Is this still valid now that it is hosted?



15. Since we are going to have the dashboard trade on solana should we change these to wrapped BTC and Wrapped ETH. Also since we are now using Drift should we add all of the drift Perp tokens? And drift swaps?



16. Please use your agents to run every test within this dashboard on everytab and check if it is all working 100% and I would like recommendations on how to make it better.
