1. Can we make a prediction market section in the dashboard from Jupiter or polymarkets that can give the user probability insights based on past performance of the likely win? And then can it be automated?

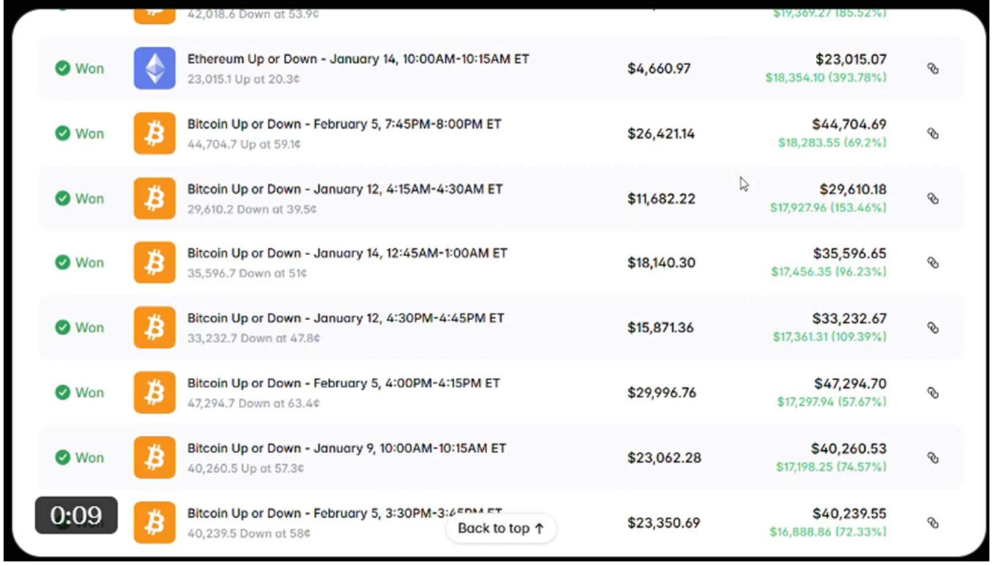
Anthropic accidentally leaked a $515,000/month money printer.

I just finished digging through a 33-page "**Claude** Skills" cheat sheet from Anthropic. Deep inside, hidden under two pages of documentation, is a prediction market **bot** structure with a 68.4% win rate.

But here's where it gets crazy: I found a wallet on Polymarket using this exact logic to print $515,000 in 30 days.

Wallet: polymarket.com/@0x0eA574F3204...



Won	Ethereum Up or Down - January 14, 10:00AM-10:15AM ET 23,015.1 Up at 20.3¢	$4,660.97	$23,015.07 $18,354.10 (393.78%)

one Polymarket account quietly turned $50 into $435,000

no one talked about it

i reverse-engineered it and asked **Claude** to build a similar **bot** using the same strategy

one prompt, 40 minutes, done

polymarket updates BTC contract prices slower than real price feeds

→ the **bot**
